CA

CE

## What is E.V. READY?

E.V. READY is an Interoperability Standard compliance certificate adopted for Type 2 and Mode 3 Charging Products in the European Markets.

As well as promoting the interoperability of charging systems, the E.V. READY certificate, promoted by Automotive OEMs through the involvement of the various stakeholders, is aimed at providing users with the highest standards of safety and performance in the charging process by taking care of the reliability, efficiency, and robustness of charging infrastructure.

## Benefits of E.V. READY Certification

E.V. READY promotes and certifies complete interoperability between charging stations and electric or plug-in hybrid vehicles, by checking that products comply with a series of requirements above and beyond those of the main existing standards, so as to ensure the quality of the electric vehicle charging options at the disposal of end-users.

As an applicant for E.V. READY, Volex has undergone a complex certification process by the approval authority ASEFA. With the European market rapidly expanding, it is vital that end-users experience the best charging performance when using our products.

Volex offers Type 2 Electric Vehicle charging cables that are designed for residential and public markets, in tethered or untethered versions, for mode 2 and 3 applications.
